

## A DATA CENTER IS A FACILITY USED FOR HOUSING A LARGE AMOUNT OF ELECTRONIC EQUIPMENT, TYPICALLY COMPUTERS AND COMMUNICATIONS EQUIPMENT.

A Data Center runs the applications that handle the core business and operational data of an organization. The dynamic nature of Data Centers requires careful planning to protect the investment and the assets that are the core of your IT infrastructure. Power and cooling alone can exceed 40% of all costs related to running a

Data Center. Add performance, survivability, manageability, scalability, redundancy, and diversity issues into the mix, and it's easy to see why choosing a company that can minimize or altogether eliminate these historical pitfalls is so important.

PCC Network Solutions understands the importance of lowering costs through the proper Design & Engineering of your Data Center. Our priority is to scrutinize every aspect of your Data Center – its function, capability, and how it will meet and then exceed your expectations.

### STRENGTH IN NUMBERS

With reliable partners such as CommScope, ADC, Corning, CPI, and AXIS, you'll be supplied with a personalized and scaled infrastructure solution that fits your business perfectly. Security and scalability are what we strive to deliver regardless of the type or size of business you need to run. Our experienced team of engineers will draw from the best products in the world to provide you with an all-in-one solution that meets your needs affordably.

A Data Center supports mission critical applications where data is being created, manipulated, and stored at increasing rates. Downtime could be devastating to a business. A Data Center must therefore keep high standards for assuring the integrity and functionality of its hosted computer environment. This is depicted in its physical and logical layout.

In order to ensure that you get the job done right, you need a contractor who understands structured cabling and Data Center infrastructure standards, uses cable and components which are of the highest quality and support the latest technical advancements, and maintains a staff of trained and experienced technicians who have worked in operating Data Centers. PCC Network Solutions is that contractor. We have experience designing and building Data Center infrastructures for companies in diverse industries, where the Data Center is their financial lifeblood.

### WE HAVE A PROVEN THEORY OF EVOLUTION.

Being hypercritical at every turn allows us to provide a solution that will serve your needs immediately and more importantly allow it to evolve in the future. It's that kind of foresight that will simultaneously maintain your data securely and save you time and money.
